Forces · Andamento della forza · Evolución de la fuerza

D Kraftverlauf

Die theoretische Ausschubkraft ergibt sich aus Fülldruck x Querschnittsfläche der Kolbenstange. Weforma Gasfedern werden nach Kundenwunsch auf einen bestimmten Druck (Ausschubkraft F_1) gefüllt. Die Ausschubkraft bezieht sich immer auf den Wert F_1 , gemessen bei $20^\circ\text{C} \pm 2^\circ\text{C}$ und bei nach unten weisender Kolbenstange.

- F_1 = Ausschubkraft bei ausgefahrener Kolbenstange
- F_2 = Ausschubkraft bei eingefahrener Kolbenstange
- F_3 = Einschubkraft bei ausgefahrener Kolbenstange
- F_4 = Einschubkraft bei eingefahrener Kolbenstange
- F_R = Reibungskraft

GB Force Diagramme

The theoretical extension force is the result of the filling pressure multiplied by the cross-sectional area of the piston rod. Weforma gas springs are filled to a pressure determined in accordance with the customer's requirements (extension force F_1). The extension force always refers to the value F_1 , measured at $20^\circ\text{C} \pm 2^\circ\text{C}$ and with a downwards facing piston rod.

- F_1 = extension force with extended piston rod
- F_2 = extension force with compressed piston rod
- F_3 = insertion force with extended piston rod
- F_4 = insertion force with compressed piston rod
- F_R = frictional force

F Forces

La force d'extension théorique est calculée en multipliant la pression de remplissage par la superficie de section de la tige de piston. Les ressorts à gaz Weforma sont remplis à une pression définie selon les souhaits du client (force d'extension F_1). La force d'extension se rapporte toujours à la valeur F_1 , mesurée à $20^\circ\text{C} \pm 2^\circ\text{C}$ et avec une tige de piston dirigée vers le bas.

- F_1 = Force d'extension avec tige de piston sortie
- F_2 = Force d'extension avec tige de piston rentrée
- F_3 = Force de compression avec tige de piston sortie
- F_4 = Force de compression avec tige de piston rentrée
- F_R = Force de frottement

I Andamento della forza

La forza di espulsione è uguale alla pressione di riempimento moltiplicata per la superficie della sezione dell' stelo del pistone. Le molle a gas Weforma vengono caricate a una determinata pressione (forza di espulsione F_1) secondo le esigenze del cliente. La forza di espulsione si riferisce sempre al valore F_1 , misurato a $20^\circ\text{C} \pm 2^\circ\text{C}$ con stelo del pistone rivolta verso il basso.

- F_1 = Forza di espulsione con stelo del pistone estratta
- F_2 = Forza di espulsione con stelo del pistone retratta
- F_3 = Forza di inserimento con stelo del pistone estratta
- F_4 = Forza di inserimento con stelo del pistone retratta
- F_R = Forza d'attrito

E Evolución de la fuerza

La fuerza de extracción teórica resulta de la presión de llenado multiplicada por la superficie trasversal de la biela. Los resortes de gas Weforma son rellenos a una presión determinada, por petición del cliente (fuerza de extracción F_1). La fuerza de extracción se basa siempre en el valor F_1 , medido a $20^\circ\text{C} \pm 2^\circ\text{C}$ y con la biela yendo hacia abajo.

- F_1 = Fuerza de extracción con la vástago del émbolo extendida
- F_2 = Fuerza de extracción con la vástago del émbolo contraída
- F_3 = Fuerza de inserción con la vástago del émbolo extendida
- F_4 = Fuerza de inserción con la vástago del émbolo contraída
- F_R = Fuerza de fricción

*Progression: linearer Kraftanstieg beim Einfahren bzw. Ausfahren, bemessen von der Nennkraft über den gesamten Hub. Die aufgeführten Werte sind beeinflussbar.

*Progression: linear force increase during extension or compression, measured by the nominal force over the entire stroke. The listed values can be influenced.

*Progression : augmentation linéaire de la force lors de la rentrée ou de la sortie, calculée à partir de la force nominale sur l'ensemble de la course. Les valeurs spécifiées sont soumises à influences.

*Progressione: incremento lineare della forza durante la ritrazione o l'estrazione, misurato dalla forza nominale su tutta la corsa. I valori riportati sono influenzabili.

*Progressión: aumento lineal de la fuerza al entrar o salir, medido de la fuerza nominal sobre todo el desplazamiento. Los valores indicados se pueden ver influidos.

Berechnung · Selection

Donnees de base ▪ Dati di base ▪ Cálculo

D AUSWAHL

Für die Auswahl bzw. Bestellung sind folgende Angaben notwendig:

S	Schwerpunkt
G	Gewicht der Klappe in N (ca. $K_p \times 10$)
b	Kraftarm (entspricht ca. 85% des erforderlichen Hubs)
X	Anzahl der Federn (in der Regel 2 Stück, pro Klappenseite eine Feder)
L	Radius

Hinweis

Als zulässige Ausschub-Krafttoleranz gilt allgemein +40N - 20N oder $\pm 5-7\%$.

Physikalisch bedingt ist die Kraft einer Gasfeder temperaturabhängig. Sie ändert sich je 10°C um ca. 3,3% (Basis $+20^\circ\text{C}$).

GB SELECTION

For the selection and/or order the following information is required:

S	Centre of gravity
G	Weight of the lid in N (ca. $K_p \times 10$)
b	Lever arm of a force (correlates to approx. 85% of the required stroke)
X	Number of springs (as a rule 2 pieces, one spring each side of the lid)
L	Radius

Note

In general the permitted extended force tolerances are +40N - 20N or $\pm 5-7\%$.

The force of a gas spring is physically dependant on temperature. It varies by approx. 3.3% (basis $+20^\circ\text{C}$) per 10°C .

F SÉLECTION

Pour la sélection et/ou la commande, nous avons besoin des informations suivantes:

S	Point de gravité
G	Poids du capot en N (ca. $K_p \times 10$)
b	Bras de force (correspond à env. 85 % de la course nécessaire)
X	Nombre de ressorts (2 en général, un ressort par côté de clapet)
L	Rayon

Remarque

La tolérance en termes de force d'extension généralement admissible est de +40N - 20N ou $\pm 5-7\%$.

Physiquement, la force d'un ressort à gaz dépend de la température. Elle est modifiée d'env. 3,3 % tous les 10°C (température de base $+20^\circ\text{C}$).

I SELEZIONE

Per la selezione e/o l'eventuale ordine, sono richieste le seguenti informazioni:

S	Baricentro
G	Peso della ribalta in N (ca. $K_p \times 10$)
b	Braccio di forza (corrisponde a ca. l'85% della corsa necessaria)
X	Numero di molle (di norma 2, una molla per ogni lato della ribalta)
L	Raggio

Nota

In generale, la tolleranza ammessa per la forza di espulsione è pari a +40N - 20N o $\pm 5-7\%$.

Per ragioni fisiche la forza di una molla a gas dipende dalla temperatura. Ogni 10°C varia del 3,3% ca. (base $+20^\circ\text{C}$).

E SELECCIÓN

Para la selección o el pedido son necesarios los siguientes datos:

S	Centro de gravedad
G	Peso de la compuerta en N (ca. $K_p \times 10$)
b	Brazo de la fuerza (corresponde a aprox. 85% del desplazamiento necesario)
X	Número de resortes (por lo general 2 uds, por lado de compuerta de un resorte)
L	Radio

Observación

Se considera por lo general la tolerancia de la fuerza de extracción permitida +40N - 20N o $\pm 5-7\%$.

Fisicamente la fuerza de un resorte de gas depende de la temperatura. Se modifica por cada 10°C aprox. 3,3% (base $+20^\circ\text{C}$).

Gasdruckfedern · Gas Springs

Ressorts à Gaz · Molle a Gas · Resortes a Gas Compression

D

Hohe Korrosionsbeständigkeit

- Gehäuse: pulverbeschichtet (WM-G 8: Messing)
- Kolbenstange: keramisch beschichtet (WM-G 8 - 40)
- Kolbenstange hartverchromt (WM-G 70)

Minimale Reibungswerte für niedrigste Ausschubkräfte

Integrierte Fettkammer und Gleitlager

- Niedrige Losbrechkraft
- Einbaulage: beliebig
- Wartungsfrei und einbaufertig
- Temperaturbereich: -30°C – +80°C, optional: -45°C – +200°C
- RoHS konform Richtlinie 2002/95/EG
- Ausschubkraft muss bei Bestellung angegeben werden

GB

High corrosion resistance

- Housing: powder coated (WM-G 8: brass)
- Piston rod: ceramic coated (WM-G 8 - 40)
- Piston rod hard chrome-plated (WM-G 70)

Minimal friction coefficient to achieve the lowest extension forces

Integrated grease chamber and sliding bearing

- Lower breakaway force
- Installation position: any
- Maintenance-free and ready for installation
- Temperature: -30°C – +80°C, optional: -45°C – +200°C
- RoHS compliant Directive 2002/95/EC
- Extension force must be stated on ordering.

F

Résistance élevée à la corrosion

- Corps : peinture à la poudre (WM-G 8 : laiton)
- Tige de piston: revêtement céramique (WM-G 8 - 40)
- Tige de piston revêtue de chrome dur (WM-G 70)

Valeurs de frottement minimales pour atteindre les plus faibles forces d'extension

Chambre de lubrification et palier lisse intégrés

- Faible force de rupture
- Position de montage: au choix
- Sans maintenance et prêt à monter
- Températures: -30°C – +80°C, en option: -45°C – +200°C
- RoHS compliant Directive 2002/95/EC
- L'effort de tarage doit être précisé lors de la commande

I

Elevata resistenza alla corrosione

- Corpo: rivestimento in polvere (WM-G 8: ottone)
- Stelo del pistone: rivestimento ceramico (WM-G 8 - 40)
- Stelo del pistone con riporto in cromo duro (WM-G 70)

Valori d'attrito ridotti per ottenere forze d'espulsione minime

Camera di lubrificazione e cuscinetti a strisciamento integrati

- Forza di spunto ridotta
- Posizione di montaggio: a scelta
- Senza manutenzione e pronte per il montaggio
- Temperatura: -20°C - +80°C, opzionale: -45°C - +200°C
- RoHS compliant Direttiva 2002/95/EC
- La forza di espulsione deve essere indicata quando si effettua l'ordine

E

Alta resistencia a la corrosión

- Carcasa: recubrimiento en polvo (WM-G 8: latón)
- Vástago del émbolo: revestimiento cerámico (WM-G 8 - 40)
- Vástago del émbolo: cromada endurecida (WM-G 70)

Valores de fricción mínimos para conseguir las menores fuerzas de extracción

Cámara de grasa y cojinetes deslizantes integrados

- Fuerza de arranque baja
- Posición de montaje: cualquiera
- Sin mantenimiento y listo para ser montado
- Temperaturas: -30°C – +80°C, opcional: -45°C – +200°C
- RoHS y que cumplan Directiva 2002/95/CE
- Debe indicarse la fuerza de extensión en el pedido

Edelstahl Gasfedern · Stainless Steel Gas Springs

Ressorts à gaz acier inoxydable · Molle a gas acciaio inox

Resortes a Gas acero inoxidable

D

Material

Einbaulage
Füllmedium
Temperaturbereich
RoHS konform

Einsatzgebiete

**Gehäuse, Kolbenstange
hochwertiges Niro Material
(V4A, AISI Nr 316L)**

Empfehlung: Kolbenstange nach unten
Stickstoff-Öl
-30°C – +80°C
Richtlinie 2002/95/EG

**Lebensmittelindustrie, Chemie,
Seewasser**

GB

Material

**Housing, Piston rod
high-quality stainless steel
(V4A, AISI No. 316L)**

Installation position Recommendation: piston rod downwards

Filling medium Nitrogen oil
Temperature -30°C – +80°C

RoHS compliant Directive 2002/95/EC

Applications Food industry, Chemicals, Seawater

F

Matériau

**Corps, Tige de piston
Niro de qualité supérieure
(V4A, AISI Nr 316L)**

Position de montage Recommandation : tige de piston vers le bas

Liquide de remplissage Azote-huile
Températures -30°C – +80°C

RoHS compliant Directive 2002/95/EC

**Applications Industrie alimentaire, chimie,
eaux de mer**

I

Materiale

**Corpo, Stelo del pistone
Inossidabile di alta qualità
(V4A, num. AISI 316L)**

Posizione di montaggio Consiglio: stelo del pistone rivolta verso il basso

Fluido di riempimento Azoto-olio
Temperatura -30°C – +80°C

RoHS compliant Direttiva 2002/95/CE

**Applicazioni Industria alimentare, chimica,
acqua di mare**

E

Material

**Carcasa, Vástago del émbolo
Inoxidable de alta calidad
(V4A, AISI Nº 316L)**

Posición de montaje Recomendación: vástago del émbolo hacia abajo

Medio de relleno Aceite de nitrógeno
Temperaturas -30°C – +80°C

RoHS y que cumplan Directiva 2002/95/CE

**Aplicaciones Industria alimentaria, industria
química, agua marina**

Gasfeder-Füllkoffer - Gas spring Refilling Kit

Gasfeder-Füllkoffer zum füllen und anpassen von Gasfedern vor Ort. Der Koffer enthält alle Füllglocken und Ablaßschrauben. Der Füllkoffer ist passend für 200 bar Stickstoff-Flaschen mit Gewinde W24,32x1/14". Stickstoff ist im Lieferumfang nicht enthalten.

The gas spring refilling kit allows to fill or adjust gas springs on site. The kit contains all necessary filling bells and release screws for our product range. The refilling kit is equipped for 200 bar nitrogen bottles with thread W24,32x1/14". Nitrogen is not included.

Gasfeder-Ablasskoffer - Gas Spring Release Kit

Gasfeder-Ablasskoffer zum kontrollierten Ablassen von Stickstoff bei Gasfedern. Der Koffer enthält alle notwendigen Ablaß-Schrauben und einen Manometer zum Prüfen des verbleibenden Drucks in der Gasfeder.

Gas spring release kit for controlled discharge of nitrogen in gas springs. The kit contains all necessary release screws and a pressure gauge to control the remaining pressure in the gas spring.

Gasfeder Füllstand - Gas Spring Filling Station

Gasfeder Füllstand zum Füllen von Gasfedern (außer WM-G-70). Der Füllstand wird inklusiver aller Fülladapter geliefert. Stickstoff ist im Lieferumfang nicht enthalten.

Gas spring filling station to fill gas springs (except WM-G-70). All necessary filling adapters are included. Nitrogen is not included.

Blockierbare Gasfedern · Lockable Gas Springs

Ressorts à gaz blocable · Molle a gas bloccabili

Resortes a gas bloqueables

D

▪ Hohe Korrosionsbeständigkeit

- Gehäuse: pulverbeschichtet
- Kolbenstange: keramisch beschichtet

▪ Stufenlos über den kompletten Hub arretierbar

▪ Minimale Reibungswerte für niedrigste Ausschubkräfte

- Integrierte Fettkammer und Gleitlager
- Niedrige Losbrechkraft
- Einbaulage: beliebig
- Wartungsfrei und einbaufertig
- Temperaturbereich: -30°C – +80°C, optional: -45°C – +200°C
- RoHS konform Richtlinie 2002/95/EG
- Ausschubkraft muss bei Bestellung angegeben werden

GB

▪ High corrosion resistance

- Housing: powder coated
- Piston rod: ceramic coated

▪ Freely lockable over the complete stroke

▪ Minimal friction coefficient to achieve the lowest extension forces

- Integrated grease chamber and sliding bearing
- Lower breakaway force
- Installation position: any
- Maintenance-free and ready for installation
- Temperature: -30°C – +80°C, optional: -45°C – +200°C
- RoHS compliant Directive 2002/95/EC
- Extension force must be stated on ordering.

F

▪ Résistance élevée à la corrosion

- Corps : peinture à la poudre
- Tige de piston : revêtement céramique

▪ Peuvent être arrêtés en continu sur l'ensemble de la course

▪ Valeurs de frottement minimales pour atteindre les plus faibles forces d'extension

- Chambre de lubrification et palier lisse intégrés
- Faible force de rupture
- Position de montage : au choix
- Sans maintenance et prêt à monter
- Températures: -30°C – +80°C, en option: -45°C – +200°C
- RoHS compliant Directive 2002/95/EC
- L'effort de tarage doit être précisé lors de la commande

I

▪ Elevata resistenza alla corrosione

- Corpo: rivestimento in polvere
- Stelo del pistone: rivestimento ceramico

▪ Bloccabili in modo continuo su tutta la corsa

▪ Valori d'attrito ridotti per ottenere forze d'espulsione minime

- Camera di lubrificazione e cuscinetti a strisciamento integrati
- Forza di spunto ridotta
- Posizione di montaggio: a scelta
- Senza manutenzione e pronte per il montaggio
- Temperatura: -20°C - +80°C, opzionale: -45°C - +200°C
- RoHS compliant Direttiva 2002/95/EC
- La forza di espulsione deve essere indicata quando si effettua l'ordine

E

▪ Alta resistencia a la corrosión

- Carcasa: recubrimiento en polvo
- Vástago del émbolo: revestimiento cerámico

▪ Bloqueables sin niveles en todo el recorrido

▪ Valores de fricción mínimos para conseguir las menores fuerzas de extracción

- Cámara de grasa y cojinetes deslizantes integrados
- Fuerza de arranque baja
- Posición de montaje: cualquiera
- Sin mantenimiento y listo para ser montado
- Temperaturas: -30°C – +80°C, opcional: -45°C – +200°C
- RoHS y que cumplan Directiva 2002/95/CE
- Debe indicarse la fuerza de extensión en el pedido

D Typ 1

- Blockierung in beide Richtungen
- Federweg trotz Blockierung möglich
- komfortable Dämpfung
- Anwendung: Sitzhöhenverstellung

GB Type 1

- Blockable in both directions
- Spring travel possible in spite of being blocked
- Comfortable shock absorption
- Application: seat height adjustment

F Type 1

- Blocage dans les deux sens
- Débattement possible malgré le blocage
- Amortissement confortable
- Application : réglage de hauteur d'assise

I Tipo 1

- Bloccaggio in entrambi i sensi
- Possibilità di deflessione nonostante il bloccaggio
- Ammortizzazione comoda
- Uso: spostamento in altezza di sedili

E Tipo 1

- Bloqueo en ambas direcciones
- A pesar del bloqueo posible alargar el resorte
- Amortiguación cómoda
- Aplicación: ajuste de la altura de los asientos

D Typ 3

- Funktionsprinzip wie bei Typ 2
- Öl- und Gasraum seitentauscht
- Anwendung: Verstellungen

GB Type 3

- Functional application as in type 2
- Oil and gas are reversed
- Application: adjusting

F Type 3

- Principe de fonctionnement similaire à celui du type 2
- Côtés des espaces huile et gaz inversés
- Application : réglages

I Tipo 3

- Stesso principio funzionale del tipo 2
- Compartimenti dell'olio e del gas invertiti lateralmente.
- Uso: spostamenti

E Tipo 3

- Principio de funcionamiento como el tipo 2
- Recinto de aceite y de gas cambiados de lado
- Aplicación: Cambios de posición

D Typ 2

- Blockierung starr bei Belastung auf Zug
- Blockierung auf Druck bleibt starr, bis die Kraft des Fülldrucks auf den Trennkolben überschritten wird.
- Anwendung: Neigungsverstellung

GB Type 2

- Fixed blocking when load is placed on the pull
- Blocking under pressure remains fixed until the force of the filling pressure on the separating piston is exceeded.
- Application: adjustable inclinations

F Type 2

- Blocage fixe en cas de sollicitation en traction
- Le blocage de la pression reste fixe jusqu'à dépassement de la force de la pression de remplissage du piston de rupture.
- Application : réglage de l'inclinaison

I Tipo 2

- Bloccaggio rigido alla sollecitazione di trazione
- Il bloccaggio a pressione rimane rigido finché non viene superata la forza della pressione di riempimento sul pistone separatore.
- Uso: regolazione dell'inclinazione

E Tipo 2

- Bloqueo rígido con carga sobre la tracción
- Bloqueo sobre presión permanece rígido, hasta que se supera la fuerza de la presión de llenado en el pistón de separación.
- Aplicación: Modificación de la inclinación

D Typ 4

- Kombination aus Typ 2 und Typ 3
- Starre Blockierung in beide Richtungen
- Anwendung: Wippmechanismen, medizinische Liegen

GB Type 4

- Combination of type 2 and type 3
- Fixed blocking in both directions
- Application: rocker mechanisms, medical couches

F Type 4

- Combinaison entre les types 2 et 3
- Blocage fixe dans les deux sens
- Application : mécanismes à bascule, lits médicaux

I Tipo 4

- Combinazione del tipo 2 e del tipo 3
- Bloccaggio rigido in entrambi i sensi
- Uso: meccanismi basculanti, lettini medici

E Tipo 4

- Combinación del tipo 2 y del tipo 3
- Bloqueo rígido en ambas direcciones
- Aplicación: mecanismos basculantes, camillas médicas

- ! Bauartbedingt kann es zu einem Spiel von bis zu 2mm kommen. Darf dies nicht vorkommen, muss die Gasfeder mit **-EL** bestellt werden.
Due to the size, there may be a slip of 2mm. If this is not allowed, you have to order the gas spring with **-EL**.
- En raison de la taille, il peut y avoir un glissement de 2mm. Si cela n'est pas autorisé, vous devez commander le ressort à gaz avec **-EL**.
A causa delle dimensioni, potrebbe esserci uno slittamento di 2 mm. Se questo non è consentito, è necessario ordinare la molla a gas con **-EL**.
Debido a su tamaño, puede haber un deslizamiento de 2 mm. Si esto no está permitido, debe pedir el pistón a gas con **-EL**.
